Social Determinants of Health and Historical Trauma:

The Impact on American Indians and Alaska Natives

Part 2 of a 3 part webinar series on the social determinants of health and their impact on cancer risk among American Indians and Alaska Natives.

American Indian and Alaska Native people have been the subject of centuries of systemic racism and discriminatory policies and practices. This includes colonization, dispossession from homelands through forced removal and relocation, forced attendance at residential boarding schools, and harmful policies aimed at assimilation, acculturation, and termination of sovereign rights and citizenship. Join us to learn about how this history has impacted Indigenous health, chronic disease, and cancer risk.

Objectives

- Describe the intergenerational transmission of trauma, impact of boarding schools, and biological implications of trauma.
- Explore the connection between historical trauma and social determinants of health.
- Recognize examples of successful American Indian and Alaska Native projects and programs that have addressed historical trauma.
- Identify practical, real-world recommendations for addressing historical trauma in cancer and other chronic disease research, policy, and practice by public health with American Indian and Alaska Native people and communities.
